

FIT LADDER • THE UNIVERSAL ENVELOPE

Every split reads the same way

A slide that outgrows its box becomes several. Now it always becomes the same *shape*: a cover that carries the masthead, the body pages, and one closing beat.

Cover, body, closing

- **Cover — always.** A slide worth splitting carries a masthead worth a lead-in: eyebrow, title, subtitle, lede
- **Body — the split content,** on the layout's own native pages, heading repeated, `(cont.)` from the second on
- **Closing — only when earned.** The trailing note lands once, at the end, never stamped on every page
- Footer, page number and the **progress rail** ride every page of the run

What this replaced

- A layout with a carousel `split` recipe got an accent cover; a plain list got a bare repeated heading
- Two looks for one move — and `partitionAxis` repeats the collection's surroundings, so a trailing note was **uplicated onto every page**
- One builder now serves both, so the shape can't drift apart again
- Turn it on per deck with `autosplit: on`

Launch readiness

fourteen checks before the gate

Everything below has to read true before we ship —
the list is the gate, not a summary of it.

Launch readiness

fourteen checks before the gate

✓ Signal intake wired

✓ Scoring model calibrated

✓ Decision log live

✓ Calibration loop running

✓ Weekly review scheduled

Launch readiness (cont.)

fourteen checks before the gate

Quarterly audit booked

Stakeholder map signed off

Risk register populated

Budget tracker reconciled

Hiring plan approved

Launch readiness (cont.)

fourteen checks before the gate

☐ Roadmap published

☐ Retrospective template ready

☐ Metrics review automated

☐ Customer interviews booked

Launch readiness (cont.)

fourteen checks before the gate

Source: the launch board, reviewed every Thursday.

Where the quarter went

spend against plan

Four programmes carried the quarter; the rest were holding patterns.

Where the quarter went

spend against plan

Signal intake

Rebuilt end to end; latency down from minutes to seconds.

Where the quarter went (cont.)

spend against plan

Scoring model

Recalibrated on eighteen months of outcomes, then frozen.

Where the quarter went (cont.)

spend against plan

Decision log

Every call has a written owner, a date, and its evidence.

Where the quarter went (cont.)

spend against plan

Calibration loop

Weekly review closes the predicted-to-actual gap.

Where the quarter went (cont.)

spend against plan

Partner onboarding

Two of five signed; three await our security review.

Where the quarter went (cont.)

spend against plan

Audit readiness

Evidence pack drafted, gaps listed, none signed yet.

Where the quarter went (cont.)

spend against plan

The three unfunded programmes are listed in the appendix, not here.

Systems of record

what holds the truth

01 Customer identity.

The CRM is authoritative; every downstream system reads it and none writes back.

02 Billing and entitlement.

The ledger holds invoices, credits, and what a customer may actually use.

03 Product telemetry.

Warehouse-derived, rebuilt nightly, never treated as evidence on its own.

04 Risk register.

The board pack is authoritative — reviewed quarterly, versioned, signed by counsel.

The invariant

- Every split run begins with **exactly one** cover and carries **at most one** closing
- The closing keeps the run's own layout, masthead and content cell — the note wears the treatment it already had
- A title-less slide has no masthead to cover with, so it keeps the plain partition — an empty accent field would be worse
- Nothing is dropped: every page is the source slide with spans **removed**, so no leaf can go missing

One move, one shape

Cover → *body* →
