One recipe for every card tag.

Numbers, slot labels, the verdict and the step label share one kernel, styled deck-wide by `tag:`.

Numbered cards carry a flush corner tag.

1

Signal Intake

Weekly structured collection, normalized into one schema before scoring.

2

Scoring Model

Each signal scored on confidence, recency and strategic relevance.

3

Decision Log

Every decision recorded with the signals and criteria behind it.

4

Calibration Loop

A monthly retrospective that adjusts the scoring weights.

tag-none keeps the number and drops the box.

1

False signal amplification

One loud voice dominating the decision. The model caps any source at 30%.

2

Signal hoarding

Signals collected, decisions unlogged. Above P2, the log is required.

Every tag on a slide takes the widest tag's size.

BUILD

Owns the scoring policy, the calibration loop and the pager.

WHY NOT BUY

Neither vendor exposes the calibration weights to the customer.

WHY NOT DELAY

The competitive window closes in 18 months.

A band may run to two lines, and every band matches it.

BUILD

Owns the scoring policy, the calibration loop and the pager.

WHY NOT BUY FROM EITHER SHORTLISTED VENDOR

Neither exposes the calibration weights to the customer.

WHY NOT DELAY

The competitive window closes in 18 months.

Before and after tags wear the accent.

BEFORE

Every prioritization debate argued from first principles, average close four hours.

→

AFTER

Decisions resolve against logged weights, average close 18 minutes.

DECISION REQUIRED

Build the whole stack, or only the part that thinks?

Building is settled; the question is which layers earn our engineers.

BUILD EVERYTHING

- Owns the plumbing and the scoring alike
- Two engineer-quarters before the first score

BUY THE PLUMBING

- Connectors ship in six weeks
- Engineering stays on the scoring and the log

RECOMMENDATION

Buy the plumbing and build the scoring.

The step label speaks in the same voice.

STEP 01

Scope

Agree the boundary.

STEP 02

Build

Ship the kernel.

STEP 03

Verify

Diff every gallery.

STEP 04

Launch

Merge and announce.

Sketch roughens every tag.

1

Intake

Ranked list of the top signals.

2

Alerts

Real-time flags past the threshold.

3

Index

Source of truth for calibration.

4

Review

A monthly look at the weights.

tag-plain and tag-large quiet the color and lift the size.

BUILD

Owns the scoring policy, the calibration loop and the pager.

WHY NOT BUY

Neither vendor exposes the calibration weights.

WHY NOT DELAY

The competitive window closes in 18 months.
