UNIVERSAL TOKEN SYSTEM · PHASE 6

Two categorical systems, two clear names.

The chart spectrum moves off the bare `--cat1-*` (which sat a hyphen from phase 1's diagram `--cat-1-*`) onto its own `--chart-cat-*`.

The near-collision, resolved.

The problem

Phase 1 introduced `--cat-1-fill` (diagram, 12 slots). The chart spectrum was `--cat1-fill` (8 slots) — one hyphen apart, easy to confuse.

Diagram categorical

`--cat-1-fill` / `--cat-1-mark` — the 12-slot band cycle for Mermaid diagrams.

Chart categorical

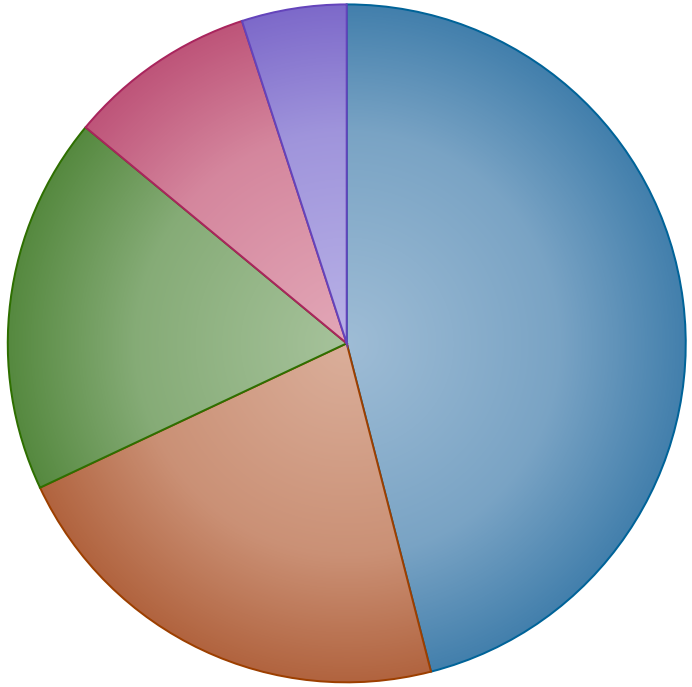

`--chart-cat-1-hue` / `-fill` / `-ink` — the 8-slot Apple-tuned spectrum for charts.

Kept distinct

Two systems by design (Wong 2011: charts cap at ~8 hues). Now the names say which is which.

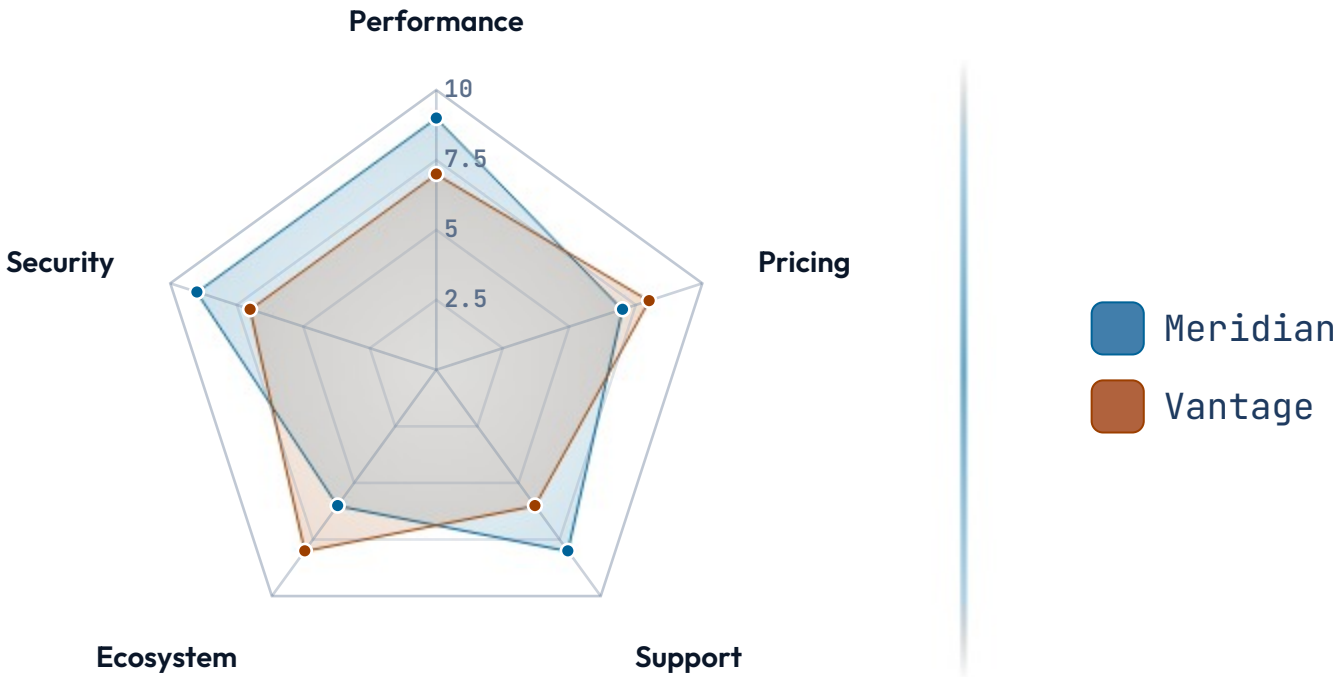

WHERE THE QUARTER WENT

Pie wedges read the chart spectrum.

Deck production	46%
Meetings about meetings	22%
Realigning on priorities	18%
Stakeholder management	9%
Actually deciding	5%

Radar series, one hue each.

PHASE 6 OF 7 · SEE ENGINEERING/DECISIONS/2026-06-11-UNIVERSAL-TOKEN-SYSTEM.MD

--chart-cat-* for charts, --cat-* for diagrams.
