ALLOWED HERE AUDIT

When NOT to reach for kpi.

Decorative pills without status semantics

The pills read as status, not freeform tags. Status color is assigned by each KPI's row position within the modifier — the engine never reads the pill text — so reserve them for the status vocabulary the position implies (`On plan`, `At risk`, `Breaching`, `Compliant`, `Remediating`). Arbitrary labels land a color that has nothing to do with the words.

When NOT to reach for kpi.

A fifth metric — or a fourth that is not terse

The supports divide whatever the title and eyebrow leave them, so count trades against label length. Measured at a **wide** @size — the box a deck is authored in, and the one where nothing paginates past the budget: three is the allowance, and a short label plus a target line fits up to a two-line title, with or without an eyebrow. A fourth needs everything terse — one status pill, no eyebrow, a one-line title. A fifth fits at no label length. Past that the ledger spills, and the export clips it and names the page — nothing shrinks silently to make room. Split across slides, or use `stats`, which drops the targets and pills and holds more rows. (A portrait or square deck paginates instead of clipping, so a long ledger there is divided into a run rather than cut.)

When NOT to reach for kpi.

Reaching for attention or spotlight to carry a fifth metric

`attention` highlights the metric that needs the room; `spotlight` monumentalizes one number. Both spend most of the stage on a single tile, so past four the hierarchy they exist to create collapses — split into two slides rather than crowding the hero.

No targets, no trends

If the KPIs carry only current values, the slide is a stats row, not a kpi dashboard. Use stats and reclaim the room.

RELATED COMPONENTS

See also.

`stats` — metric row without targets or status pills

`big-number` — a single number is the whole argument

`split-panel` — one KPI with a paragraph of supporting prose

`progress` — completion percentages across parallel workstreams

`timeline-list` — milestones in time, not metrics at a moment
