IMAGERY · CANVAS · PROSE

video

A video as a static, PDF-safe embed: a poster that links to the clip, a play badge, the provider's name, and a scannable QR to the same URL — never a live iframe.

The video card plays beside its context.

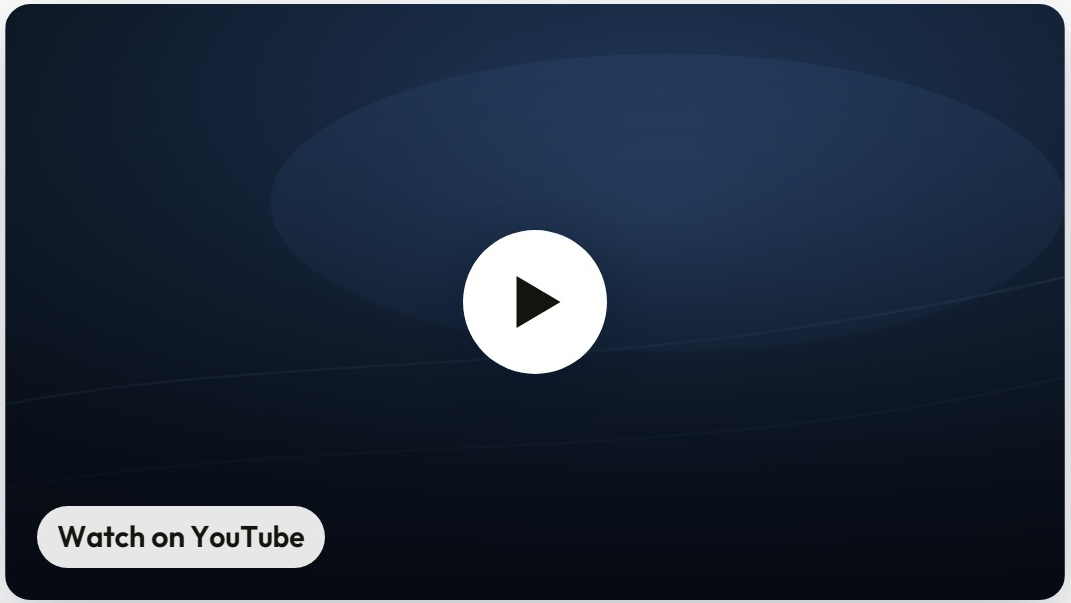

Ninety seconds, unscripted: signup to a published deck without touching support.

Ree A., Head of Ops at Northwind

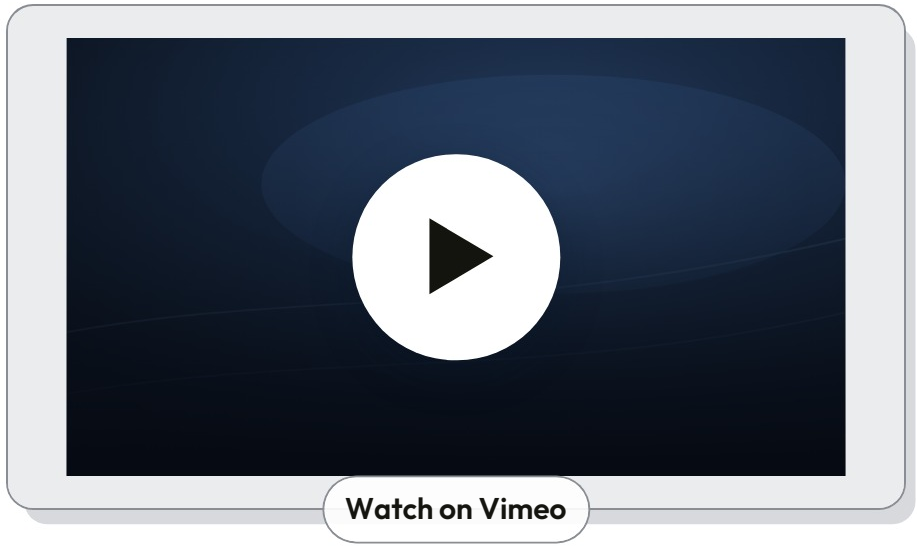

companion seats the player beside its pitch.

When NOT to reach for video.

Expecting it to autoplay in the PDF

A PDF is paper — it can't play video, and the engine bars iframes for security. `video` is a poster + scannable link by design. If you need in-app playback, that's a separate interactive surface, not a boardroom deck.

A wall of caption

The caption is one line — 'Scan to watch', a title, a runtime. If you're writing a paragraph about the video, put it in a `content` slide and drop the clip in as a supporting `video`.

When NOT to reach for video.

Instagram with no poster

Instagram's public thumbnails aren't fetchable, so an Instagram `video` with no `poster=` word falls back to a plain placeholder tile. Author a `poster` for a real still.

RELATED COMPONENTS

See also.

`image` — the visual is a still photo or screenshot, not a video

`closing` — the send-off is a call to action with a QR, not a specific clip

`diagram` — the motion you want is an animated process — a Mermaid diagram may say it statically
